TRIPLEPLAY

CAVEMAN 3.0

### *More simple innovations & unparalleled client device support*

With 25 new features and multiple enhancements across the platform, Caveman 3.0 is one of Tripleplay's most significant software releases to date. Tripleplay has continued to develop more simple innovations, ensuring users have a reliable and future proof platform for enterprise video, IPTV and digital signage.

KEY NEW FEATURES

6-WAY MULTIVIEW VIDEO STREAMING

Multiview allows end-users to simultaneously stream up to 6 multicast videos on a single endpoint. Mutiview can deliver live news streams, business feeds, multiple camera angles, and live video stream monitoring.

SOCIAL MEDIA PLUGIN FOR TRIPLESIGN

The Social Media Plugin allows for the fetch and display of content from social networks Twitter and Yammer, displaying posts in real-time within a digital signage layout.

TRIPLEVIEW SERVER MONITORING

TripleView allows users to actively monitor the health of one or more Tripleplay servers and the client devices attached to them. This feature shows how users are using the system as well as sending error notifications.

TRIPLECLIENT MAP VIEW AND DEVICE CONTROL

Map View allows users to view their installed end points on a map of the site or sites that they manage. Once selected the user can control the channel, power, volume and input on any given end device.

Other stand out features include: Multicast to Unicast video streaming support; Closed Caption Processing and Subtitle Upload for Videos; SAML authentication for User Management Pages; and optimized video playback.
