#STAYS SAFE IN HOTELS

As people start travelling nationally and internationally, it is important that hotels have an agile digital communications platform that can easily display local health and safety messaging. The safer the hotel environment is, the more empowered people will feel checking in, so the technology you adopt is paramount.

DIGITAL SIGNAGE

Display health and safety messaging in the lobby and throughout hotels to ensure guests stay socially distanced and informed. Digital signage also helps to promote on-site services helping maximise guest experience and increasing profitability.

CONTENT TAGGING

For hotel chains, creating content from multiple national and international locations can be tiresome. Content tagging allows users to display relevant content to sites allowing guests, no matter their location, to stay safe.

OCCUPANCY MANAGEMENT

Monitor occupancy levels in public areas such as lobbies, bars, restaurants, gyms and spa facilities throughout hotels to avoid congestion and maintain social distancing. Real-time digital displays easily direct people to safe locations.

CONTACTLESS BYOD/BYOC

With many local attractions closed, enhancing guest room experience has never been more important. Allow guests to stream their own content, with QR code enabled, device pairing, for a personalised in room entertainment solution.
