ON CAMPUS

#STAYS SAFE ON CAMPUS

Starting college or university is a huge part of a person's life, however, college life is now going to be considerably different, with social distancing being enforced along with smaller class sizes and an increase in remote learning. Learn how digital media technology can help everyone stay safe on campus and in their accommodation.

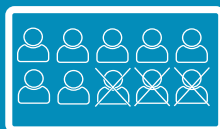

DIGITAL SIGNAGE

Digital signage is a great way of maintaining an engaging learning environment. Delivering eye catching, dynamic content allows students and staff to stay informed as well as communicating up-to-date health and safety measures.

LEARNING THROUGH VIDEO

With a robust IPTV and video platform, colleges can stream live lectures and classes to other smaller classrooms across campus, reducing the risk of large groups gathering and ensuring no student misses out on class!

OCCUPANCY MANAGEMENT

Monitor occupancy levels in buildings throughout campus, avoid congestion and maintain social distancing. With real-time digital displays indicating what rooms are busy, easily direct people to other study areas or safer places on campus.

VIDEO EVERYWHERE

Share video and digital content to desktops and mobile devices to communicate and maintain engagement with remote students. Deliver live lectures and college events, learning materials and health and safety videos.
